

# Hana Fiber Build – Focus on Necessary Easements

# Opportunity

- Hawaiian Telcom is working to plan and construct a fiber optic cable to Hana, a project enabled by the Connect America Fund
  
- Key challenge is acquiring the easements for the fiber route
  - Land Owner Approval: HT will need easements from seven property owners to secure a path to Hana
  - Easement/License Area: 15' - 25' wide, non-exclusive easement for the installation and maintenance of telecommunications equipment
  - Right-Of-Entry (ROE): Will allow immediate access for design, engineering, and construction of the general route approved by the landowners
  - Easement: Final metes and bounds will be surveyed and submitted with the easement based on the as-built facilities
  
- Obtaining easements to expedite this project is vital to meet East Maui's increasing demand for telehealth and broadband
  
- Key benefits to the community
